General Technical Information on Interference Suppression	2
Ordering Code	3
QX Series Range	4
BY Series Range	10

As we are anxious that our customers should benefit from the latest developments in the technology and standards, AVX reserves the right to modify the characteristics published in this brochure.

NOTICE: Specifications are subject to change without notice. Contact your nearest AVX Sales Office for the latest specifications. All statements, information and data given herein are believed to be accurate and reliable, but are presented without guarantee, warranty, or responsibility of any kind, expressed or implied. Statements or suggestions concerning possible use of our products are made without representation or warranty that any such use is free of patent infringement and are not recommendations to infringe any patent. The user should not assume that all safety measures are indicated or that other measures may not be required. Specifications are typical and may not apply to all applications.

General Technical Information

Electrical and electronic equipment which have rapid fluctuations in mains current, generate electromagnetic disturbances which cause radio interference over a large spectrum of frequency.

These disturbances can be caused by motors, thyristors, triacs, thermostats, neon tubes, or in general all equipment employing some means of commutation.

Interference from source to receiver is spread in three ways: along conductors, by coupling and by radiation. To frequencies of 30 MHz approximately, interference is spread mainly along the installed electrical conductors. In this range inductive and capacitive coupling also occurs between the conductors and other metallic parts of the devices acting as supports of interference transfer.

Frequencies higher than 30 MHz are spread by radiation since interference source dimensions and terminal conductors are in order of size to the wave length of the radiated

interference. The metallic parts, therefore, act as antennae.

In order to reduce these disturbances, which are inconvenient and sometimes serious, it is recommended and sometimes required that one or more suppression capacitors should be introduced into the mains circuit (see examples).

The second role is to protect the electrical system in which it is used against the surge voltage that may be caused by lightning. The energy in this case will be absorbed by the capacitor and not by the electrical circuit.

Standards organizations in many countries have studied the different problems caused, and defined their own requirements as to quality and performance of the capacitors.

Some of these organizations are as follows:

VDE (Germany) - ASE (Switzerland) - UL (USA)

CSA (Canada) - EN 132 400 (Europe).

TWO PRINCIPAL CLASSES OF CAPACITORS HAVE BEEN DEFINED.

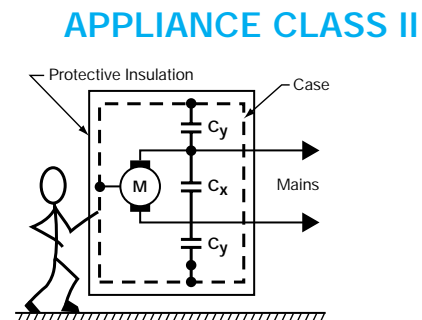

- **Class "X"**

Capacitors intended for applications where a short circuit will not cause a dangerous electric shock.

- **Class "Y"**

Capacitors with greater mechanical and electrical security, which exclude short circuits within the capacitor. Capacitances are limited to reduce currents to a safe limit.

Depending on function, class "X" capacitors are connected between each line conductor, class "Y" between a conductor and earth or a metal element in the equipment.

Cx: Suppression capacitors - Function (or class) X

Cy: Suppression capacitors - Function (or class) Y

The examples above show protection and suppression of a motor by using X and Y capacitors.

Suppressor Capacitors

Other existing suffix for different lead length up to 26 mm.

General Technical Data

DESCRIPTION

Metallized polyester film capacitor. Box made of solvent resistant and self-extinguishing UL 94 VO material.

APPLICATIONS

- For X2 electromagnetic interference suppression.
- Specially designed to meet the requirements of the NEW IEC 384-14 specification (2.5 kV peak pulse voltage test).
- Approved for 3 kV pulse test.

GENERAL CHARACTERISTICS

Capacitance range 1 nF to 2.2 μ F/E6 Series

Tolerance on capacitance $\pm 10\%$, $\pm 20\%$

Rated voltage 275 Vac

Temperature range -40°C to $+100^{\circ}\text{C}$

Climatic category 40/100/21

Safety class X2

TESTS RELATED TO IEC 384 -14 (2ND EDITION '93) AND EN 132 400

According to IEC 384-14 (2nd Edition 1993) and EN132400 our X2 suppression capacitors withstand the following tests (type test):

Impulse voltage test (before endurance test)

$V_{PEAK} = 2.5 \text{ kV}$ (Class X2)

Endurance test

The capacitors are tested for 1000 hours at upper category temperature with a voltage of $1.25 \times U_R$ for Class X2.

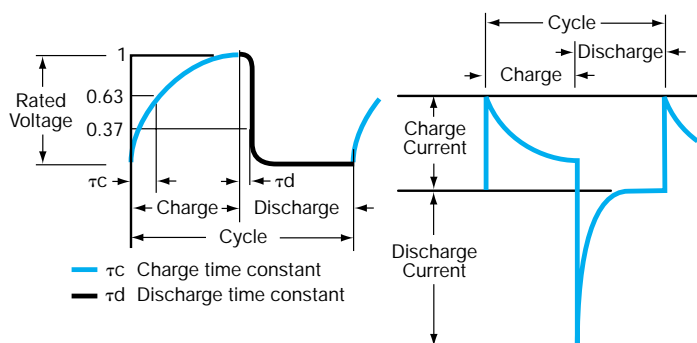

Every hour the test voltage is increased up to $1000 V_{RMS}/50 \text{ Hz}$ for a period of 0.1s.

Active flammability test

The capacitors are tested at the rated voltage (V_{ac}) at 50 Hz with superimposed 20 pulses at 2.5 kV for Class X2 with an interval between the successive pulses of 5 seconds.

The rated voltage is kept for 2 min. after the last discharge. At the end of the test the capacitor does not burn (control made with the cheesecloth wrapped on the body of capacitors).

Charge and discharge test

The capacitors are subjected to 10,000 cycles of charge and discharge at the rate of approximately one operation per second.

Characteristics vs. Temperature (Typical Curves)

DESCRIPTION

Polypropylene film capacitors, insulated plastic case* with stand-offs, epoxy resin* sealed, radial lead outputs.

* Flame retardant materials (UL 94 V1)

GENERAL CHARACTERISTICS

Capacitance range	1 nF to 22 nF/E6 Series
Tolerance on capacitance	$\pm 10\%$, $\pm 20\%$
Rated voltage	$U_r = 250 \text{ Vac}$
Climatic category	40/085/21
RMS test voltage	- Between terminals $U_e \text{ rms: } 1.5 \text{ kV during } 1 \text{ mn}$ - Between shorted terminals and case $U_e \text{ rms: } 2 \text{ kV during } 1 \text{ mn}$
Tangent of loss angle	$Tg\delta \leq 20 \times 10^{-4}$
Insulation resistance	$R_i \geq 10 \text{ G}\Omega$
Life test 1000 h at 85°C	- RMS applied voltage $U_{rms}: 438 \text{ V (1.75 } U_r) +$ 1000 V during 0.1s per hour

APPLICATIONS

- Y function suppression capacitor ($U_{rms} = 250 \text{ V}$).
- Mains suppression, earth-mains connection, shock protection.
- Non-inductive, self-healing, insulated.
